

For the scenario below identify the entities, their attributes and appropriate keys

### The Angel Warehouse

The Angel Warehouse stores **items** for its parent company. The warehouse is organised into **bays**, which are storage areas, but the items themselves are stored in **bins**. Each bay contains a number of **bins**. Each bay is identified by a **unique bay number** and the **bay location** and the **height of the bay** are recorded. Each **bin has a different number** within the bay, always starting with bin no. 1, and while some bays have only 5 bins some have over 50. The **size of each** bin is recorded.

Some bays have a parking spot for one **fork lift** to help move items round the warehouse and lift items into bins. Each fork lift is allocated to a bay. Each fork lift has a **unique equipment number** and the **maximum carrying weight of the fork lift** needs to be known. Some fork lifts are **petrol driven** while some are electric.

For all bins the **maximum loaded weight** must be known.

When an item is taken into the warehouse it is assigned a **unique number** and the **date** is recorded as well as the **item weight**. Bins can **store a number of items** and when an **item is put in a particular bin this date** is also recorded. Items can be moved back and forth between bays and bins to optimise the warehouse storage.

**Entity**

**Attribute**

**Key – Primary, Foreign**

Format below: Entity – Attributes listed (keys)

Item – **Unique number (Primary)**, Date taken into the warehouse, Item weight, Date put in bin

Bin - **Bin number**, Bin size, maximum loaded weight, number of items stored?

Bay – **Unique bay number (Primary)**, number of bins, height of bay, bay location, fork lift **(Foreign?)**

Fork lift – **Unique equipment number (Primary)** , maximum carrying weight, petrol/electric, bay at which it is situated?
